DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: Species I as represented in part by Figure 5 wherein the pll has the I_{bp} output is directly connected to the bias generator 24; Species II as represented in part by Figure 6, wherein the pll has V_{bn} directly connected to the charge pump 22 and I_{bp} is produced by a isolated output 120 (Figure 6); Species III as represented in part by Figure 8, wherein the pll has V_{bn} directly connected to the charge pump 22 and I_{bp} is produced by correction circuit 220 (Figure 8) that forms a "series of smaller pulses". Species IV as represented in part by Figures 9 and 10, wherein the pll has V_{bn} directly connected to the charge pump 22 and I_{bp} is produced by a circuit 240 (Figure 9) that forms correction "over an increased period of time". Note that Figure 1 is not generic to the various species as this Figure does not include all the limitations generic to both species. For example Figure 1 shows the direct connection of the V_{bn} to the charge pump which is not generic to Species I wherein this species requires that jitter reducing circuit be connected between V_{bn} and the charge pump 22.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael B. Shingleton whose telephone number is (571)272-1770. The examiner can

normally be reached on Tues-Fri from 8:30 to 4:30. The examiner can also be reached on alternate Fridays. The examiner normally has second Mondays of the bi-week off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal, can be reached on (571)272-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
